TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Python

Technologies: Node.js, Express, NestJS, React.js, Vue.js, GraphQL, Microservices, LLM APIs (Anthropic, Gemini)

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka, Prisma, AWS S3

Cloud & Infrastructure: AWS, Docker, Kubernetes, GitHub Actions, Jenkins

Tools & Practices: Git, Jira, Jest, Prompt Engineering, End-to-end testing

EXPERIENCE

Freelance Software Engineer

Sep 2025 – Present

Independent Contractor

Burnaby, BC

- Designed and built Kaffelog, a mobile application for coffee enthusiasts to log beans, brews, and tasting notes, handling the full stack from data model to UI
- Built a computer vision integration with Google ML Kit OCR and Gemini-based parsing to auto-populate bean records from a photo of the packaging, cutting manual data entry.
- Configuring the Android build and release pipeline, including signing, store listing setup, and release testing, ahead of Google Play Store launch

Senior Software Engineer (Lead)

Nov 2022 – Oct 2024

ECAD Labs Inc.

Vancouver, BC

- Led development of a production-grade open-source TypeScript platform and SDK used by a broad developer community, making it the most widely used TypeScript library for the Tezos blockchain
- Supported business growth and client acquisition by providing a stable, performant platform for product demonstrations through the integration of complex RESTful and RPC based APIs into a responsive React frontend
- Served as the primary point of contact for ecosystem partners, facilitating proactive communication regarding new features and API updates to ensure seamless integration and minimal disruption for external developer teams
- Actively supported users via GitHub issues and community forums, diagnosing complex edge cases and improving developer experience, amassing more than 300 GitHub stars

Software Engineer

Nov 2021 – Nov 2022

ECAD Labs Inc.

Vancouver, BC

- Accelerated platform adoption across the Tezos developer community by architecting simple, intuitive TypeScript abstractions for intricate protocol operations, enabling successful integration for over 20 external partners
- Developed and integrated a custom feedback component for our product's documentation website, implementing an end-to-end pipeline that streamed user sentiment data directly into Google Analytics for real-time analysis, resulting in increased reader satisfaction by 50%
- Minimized post-release support overhead and improved developer experience by writing comprehensive integration tests to prevent regressions across protocol changes and increase stability, measured by a 75% reduction in support requests following version updates

Software Engineer in Test

Mar 2020 – Nov 2021

Electronic Arts Inc.

Burnaby, BC

- Developed scalable automated test frameworks for REST and GraphQL APIs using TypeScript and modern JavaScript testing libraries, ensuring more than 85% test coverage across several engineering teams
- Owned production observability using New Relic and Kibana, proactively identifying performance degradations and leading incident resolution before customer impact

QA Test Engineer

Sep 2019 – Mar 2020

Vipre Security

Burnaby, BC

- Built a Go-based automation template generator that reduced manual testing time by 2 hours per feature, driving a 30% automation coverage increase across new features and projects

EDUCATION

Simon Fraser University

May 2015 – Jun 2019

B.S. Computer Science, Graduated with Co-op

Burnaby, BC
